Every judge will score slightly different. For example: one judge considers 75/100 to be a great score while another may give 75/100 as their lowest score.

We want the BEST to advance to ICDC regardless of which judge they see.

The **standard deviation** is a statistic that measures the dispersion of a data set relative to its mean and is calculated as the square root of the variance. ... If the data points are further from the mean, there is a higher deviation within the data set; thus, the more spread out the data, the higher the standard deviation.
